

enviro SurfaPore M

WATER, OIL & DIRT REPELLENT FOR MARBLE & POROUS SURFACES

Enviro SurfaPore M is a water-based formulation, specifically designed to harness the power of nanotechnology to achieve both oil and water repellency. The core nano-sized particles are engineered to fit the pores of the applied surface, penetrating and “flooding” the pores. After coating, water, oil and dirt fail to penetrate the pores of the substrate, providing easy cleaning and protection against stains.

KEY BENEFITS

- ✓ Long-lasting & UV-resistant – does not discolour or yellow
- ✓ High breathability – no swelling or cracking due to trapped moisture
- ✓ Water based environmentally friendly solution
- ✓ Odourless and easy to apply
- ✓ Does not change the appearance of the protected surface

WATER, OIL & DIRT REPELLENT FOR MARBLE & POROUS SURFACES

TYPICAL USES & APPLICATION SURFACES

Enviro SurfaPore M can be used on porous cementitious surfaces (concrete, mortar, grout, render etc.) and unpolished natural and artificial stone in areas that require water, oil and stain protection such as floors, garages, terraces, interior/ exterior walls, roofs and more.

APPLICATION

For any surface, test on a small area before full scale application. Apply 2 coats of Enviro SurfaPore M by using a brush, roller or spray gun. No dilution is required.

The second coat should be applied after the first coat has visibly penetrated and dried, and no more than 3 hours after the first application. Maximum water repellency is achieved 24 hours post application.

DURABILITY

Enviro SurfaPore M will last up to 10 years, depending on application, maintenance, type of use, type of stone or tile, type of environment and climate.

Note: Enviro SurfaPore M will not prevent surface wear or etching from acids or caustic chemicals.

RESULTS

Marble treated with Enviro SurfaPore M (top) as opposed to a reference marble (bottom).

Oil droplets on a porous, cementitious surface treated with Enviro SurfaPore M.
